through a process similar to the standard tunneling called dynamical tunneling (44, 45) This dynamical tunneling can be strongly affected by the presence of the chaotic states (46-6321), which , results in large variations of the tunneling rate over a short range of parameter, leading to so-called chaos-assisted tunneling reso-

easily measurable change of the tunneling current, which allows one to determine the dissociation rate. Altogether 175 molecules were dissociated at four different tunneling currents of 001, 002, 003, and 06 nA, respectively. The linear dependence of the dissociation rate on the tunneling current [Fig 4(a)] shows that the energy transfer

IPSec, VPN, and Firewall Concepts

L2TP Layer 2 Tunneling Protocol (L2TP) is an IETF standard tunneling protocol that tunnels PPP traffic over LANs or public networks. L2TP was developed to address the limitations of IPSec for client-to-gateway and gateway-to-gateway configuration, without limiting multivendor interoperability. An extension of PPP, L2TP is based on L2F and PPTP.
